

• Ask yourself...

Virtualization Assessment

Are some of your systems overloaded while others sit almost idle?

Are you inundated by virtualization vendors and need neutral, expert advice on how to proceed?

Have you heard about virtualization's benefits, but want to know exactly what this would mean for you?

Are you faced with an aging server estate and want to know how virtualization can diffuse this time bomb?

Do you want to virtualize while minimising or eliminating new capital equipment purchases?

Virtual Infrastructure Design

Are you using virtualization in test and development and would like to extend its use to production systems?

Do you need to increase computing capacity but don't have the space, power, or cooling to do so?

Are you under pressure to support a growing business, with a shrinking capital equipment budget?

Have you been asked to contribute to carbon savings, but are not sure how to do so?

Quick Start

Do you urgently need to get IT staff up to speed quickly on virtualization?

Have you exhausted physical server resources and need to virtualize something immediately?

Do you have a large number of servers to deploy, but need to do it faster than is possible with physical systems?

Interim Cover & Support

Do you find it difficult to hire and retain skilled virtualization experts within your team?

Do you have a project which requires virtualization expertise, but doesn't warrant a full time employee?

Do you have a head-count freeze and now need to take on virtualization as a skill set?

Are you exposed to risk if a VMware, Xen, or Hyper-V skilled member of your team resigns or is absent?

Training

Do you urgently need get IT staff up to speed on virtualization?

Do you need certified virtualization engineers to gain company accreditation?

Are you finding yourself dependent on external skills and people for core-IT functions?

if the answer to any of these questions is
YES
